<main>

<section>

<h1>

NAME

<h2> - "aspiring web dev. she codes plus student."

<p> - biography / mission statement

<div class = "buttons">

<button>

MY PROJECTS

<button>

REACH OUT!

inline-block
or flex?

changed to
"About Me"

<footer>

<header same as landing page>

<main>

<h1>

MY PROJECTS

<section>

<div>

↳ snapshots of
proj

- possibly make image a
link to website link or
github link for code

<h2>

TITLE

<div>

<div>

← repeat ←

<footer same as landing page>

I am no longer having a separate contact page. I replaced this with an About Me page so I don't need to create a brand new page. Moved contact form to the main page below the intro section.

<h1>

REACH OUT !

<div?> <section?>

ended up moving
contact form to the
main page.

how to keep code within main to keep center of page?

how to get footer to rest at the bottom of page?

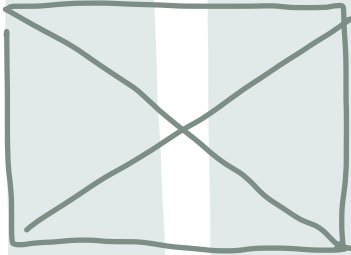

position: fixed; -
bottom: 0px;

$$vh = \text{viewheight} - \text{fix to screen height of html}$$

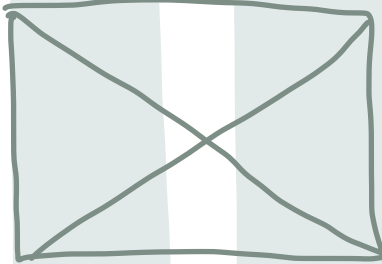

ABOUT ME

Same layout as project page for now. Just moved title above image. Will change in the future to make it in rows instead of columns
